Sequence 3, Application US/09343485A;
Patent No. 641377;
GENERAL INFORMATION:
APPLICANT: BARNET, RICHARD S.
APPLICANT: MITCHELL R.
APPLICANT: MICACHIAN, KAREN R.
TITLE OF INVENTION: WEATHOD FOR INTEGRATING GENES AT SPECIFIC SITES IN TITLE OF INVENTION: WAMMALIAN CELLS VIA HOMOLOGOUS RECOMBINATION AND TITLE OF INVENTION: WAMMALIAN CELLS VIA HOMOLOGOUS RECOMBINATION AND TITLE OF INVENTION: WAMMALIAN CELLS VIA HOMOLOGOUS RECOMBINATION AND TITLE OF INVENTION: UNUBER: US/09/343,485A
CURRENT FAPLICATION NUMBER: US/09/343,485A
CURRENT FILING DATE: 1999-06-30
PRIOR FILING DATE: 1999-06-33
PRIOR FILING DATE: 1999-03-34
PRIOR FILING DATE: 1997-03-14
NUMBER OF SEQ ID NOS: 3
SOFTWARE PROFILED NOS: 3

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The invention provides a human monoclonal antibody (I) and its functional fragments specifically reactive with an F protein epitope of respiratory syncytial virus (RSV), and capable of neutralizing infection by the virus such as Glambda-1A or Glambda-1B. The antibody can be expressed by standard recombinant methodology. (I) is useful for detecting RSV by contacting a source suspected of containing RSV with (I) and determining whether (I) binds to the source. (I) is also useful for providing passive immunotherapy prophylactically, to RSV disease in a human. (I) is useful for therapeutic and/or prophylactic treatment of RSV infection in human patients, particularly infants and young children. (I) is also useful as a diagnostic reagent for the determination of RSV mediated disorders or for tracking progress of treatment of the disorders sequence represents the continuous DNA sequence of the coding region of the heavy chain of plasmid Glambda-1Bpcd.
                                                                                                                                                                                                                                                                                                                                                                       therapeutic and/or prophylactic treatment of respiratory syncytial virus infection, is specifically reactive with the F protein epitope of

This is the DNA sequence of plasmid Hu19BHcpcd, which includes a coding region for anti-respiratory syncytial virus (RSV) fusion (F) protein human monoclonal antibody (MAD) Hu19B heavy chain (see also AAW59616). Hu19BLcpcn (see AAV41430) encoding the Hu19B light chain is also provided. These vectors were used to produce Hu19B in transfected COS and CHO cells. Hu19A, Hu19B, Hu19C and Hu19B in transfected COS and CHO cells. Hu19A, Hu19B, Hu19C and Hu19B in transfected from 19A, 19B, 19C or 19D (see AAW59615-18); a light chain selected from 19A, 19B, 19C or 19D (see AAW59615-18). These are neutralising engineered antibodies that inhibit virus crowth in vitro and in vivo in animal models of RSV infection. They can be used in the detection, prevention and passive immunotherapy of RSV infection. Nucleic acids encoding the human combinant plasmids (see AAV41427-33) and host cells are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 GTGCAACTGGTGGAGTCTGGGGGAGGCTTGGTCCAGCCTGGCGGGTCCCTGAGAGTCTCC 120

coding region for anti-respiratory syncytial virus (RSV) fusion (F) protein human monoclonal antibody (MAb) Hu19D heavy chain (see also AAW55618). Hu19CLCpcn (see AAV41413) encoding the Hu19C light chain is also provided. These vectors were used to produce Hu19C in transfected COS and CHO cells. Hu19A, Hu19B, Hu19C and Hu19D MAbs are claimed. These are reshaped human antibodies comprising a heavy chain selected from 19A, 19B, 19C or 19D (see AAW55615-18), and a light chain selected from 19A, 19B, 19C or 19D (see AAW55620-21). These are neutralising engineered antibodies that inhibit virus growth in vitro and in vivo in animal models of RSV infection. They can be used in the detection, prevention and passive immunotherapy of RSV infection. Nucleic acids encoding the human MAbs, recombinant plasmids (see AAV41427-33) and host cells are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           73 GTGCAGCTGGTGGAGTCTGGGGGGGGGCCTGGTCAGGCCTGGCGGGGGTCCCTAAGACTCTCG 132

Hu19CLpcn (see AAV4143) encoding the Hu19C light chain is also provided. These vectors were used to produce Hu19C in transfected COS and CHO cells. Hu19A, Hu19B, Hu19C and Hu19D MADS are claimed. These are reshaped human antibodies comprising a heavy chain selected from 19A, 19B, 19C or 19D (see AAW55615-18), and a light chain selected from 19A, 19B, 19C or 19D (see AAW55615-18). These are neutralising engineered antibodies that inhibit virus growth in vitro and in vivo in animal models of RSV infection. They can be used in the detection, prevention and passive immunotherapy of RSV infection. Nucleic acids encoding the human MADS, recombinant plasmids (see AAV41427-33) and host cells are

Reff ME Barnett RS, McLachlan KR, WPI; 1998-521229/44.

9 Site specific integration of DNA in mammals for expressing, immunoglobulins - comprises homologous recombination using selectable marker and target plasmids.

Example 1; Fig 10; 114pp; English

This is the nuclectide sequence of novel target plasmid Mandy. The plasmid includes an inactivated murine dihydrofolate reductase. (DHFR) gene, the Escherichia coli beta-galactorsidase gene, baculovirus DNA, a cassette comprising the promoter and enhancer elements from cytomegalovirus and Sv40 virus, the E. coli hactivated Salmonella typhimurium histidinol dehydrogenase (Hisp) gene and transposon TnS neemycin phosphotransferase (meo) gene end mammalian cell with a 'marker plasmid' such as Desmond (see ANA67792), which cell with a 'marker plasmid' such as Desmond (see ANA67792), which contains a unique sequence that is foreign to the mammalian cell genome and which provides a substrate for homologous recombination with the unique sequence which provides for homologous recombination system utilises the neo gene as a dominant selectable marker. The neo gene es of the end of the marker plasmid into the mammalian cells. Exons I and commologous recombination system utilises the neo gene as a dominant selectable marker. The neo gene and ecombination of the marker plasmid into the mammalian cells. Exons I and 2 are present on the marker plasmid into the mammalian cells. Exons I and 2 are present on the marker plasmid into the mammalian cells. Exons I and 2 are present on the mammalian cells. Exons I and 2 are present on the mammalian cells of the marker plasmid into the mammalian cells. Exons I and 2 are present on the mammalian cells of the marker plasmid into the mammalian cells of a riphly spliced delect

It is possible that two extra bases have been inserted as a typographical error in the specification (i.e. that the 5'-UTR sequence is incorrect as printed in the specification and reproduced here). The sequence comprises a human cDNA insert encoding the 3D6 heavy chain if lanked by short stretches of pUCI9 DNA. The variable region of the heavy chain is used in a recombinant protein with the variable region from the kappa light chain of 3D6, the two V regions being joined by a linker. The recombinant protein binds to HIV gp160.

The invention relates to polynucleotides encoding novel human proteins or their active domains. The polypeptides, polynucleotides and antibodies raised against the polypeptides are used in a method of treatment of a mammal and prevention of disorders caused by the aberrant protein expression or activity. The polypeptides can be used as molecular weight markers, food supplements, and in antibody production. The polypeptides are used to identify compounds which bind to the polypeptides. Polynucleotides of the invention are used as probes and primers, for sequencing, for chromosome or gene mapping, in the primers, for sequencing, for chromosome or gene mapping, in the primers, for sequencing, for chromosome or gene mapping, in the production of recombinant proteins, and in generating anti-sense DNA or RNA and in gene therapy. Polypeptides of the invention can be used to target drugs to a tumour, in assays to determine biological activity, to target antibodies/lelicit an immune response, to determine quantitative protein levels, as tissue markers, and to isolate receptors or ligands. Polypeptides of the invention may also be useful in treating platelet disorders, stem cell disorders, regenerating bone, cartilage, tendon, immunomodulatory; cytostatic; neuroprotective; vulnerary; nootropic; anticonvulsant; antiarthritic; cerebroprotective; antifungal; antiviral; antibacterial; antiallergic; dermatological; haemostatic; antiasthmatic; thrombolytic; immunogen; antibody; gene therapy; neurological disorder; Parkinson's disease; inflammatory disorder; cancer; asthma; osteoporosis; tissue regeneration; immune disorder. 1320 CTCACCGTGGACAAGAGCAGGTGGCAGCAGGGGAACGTCTTCTCATGCTCCGTGATGCAT 1380 1312 CTCACCGTGGACAAGAGCAGCAGCAGCAGCAGCAGCATCTTCTCATGCTCCGTGATGCAT 1371 Human; novel protein; 88; Antianaemic; osteopathic; antiinflammatory; Isolated polypeptides useful for treating anti-inflammatory diseases, nervous system disorders, and for regenerating bone and cartilage -AAAGGCTTCTATCCCAGCGACATCGCCGTGGAGTGGGAGGAATGGGCAGCCGGAGAAC AACTACAAGACCACGCCTCCCGTGCTGGACTCCGACGGCTCCTTCTTCCTACAGCAAG Human cDNA encoding a novel human protein #159. ```
This polynucleotide sequence represents the cDNA of the heavy chain of the monoclonal antibody from clone JA. The invention relates to an isolated human monoclonal rabies virus neutralising antibody (virucide) derived from cDNA clones encoding the antibody heavy and light chains expressed in heterologous expression systems and purified away from deleterious contaminants. The invention provides a fused gene encoding a chimmeric immunoglobulin light chain and a fused gene encoding a chimmeric immunoglobulin. The antibody of the invention is useful for treating an individual exposed to a rabies virus by administering to the individual a therapeutically effective amount of the antibody, and preventing a spread of the rabies virus to the central nervous system (CNS). The antibody of the invention provides a safe and efficacious post exposure prophylactic therapy for individuals exposed to a rabies virus.
                                                                                                                                                                                                                      HRIG; human rabies-immune globulin; monoclonal; virucide; heavy chain; human monoclonal rabies virus neutralising antibody; immunoglobulin; light chain; central nervous system; CNS; prophylactic therapy; clone JA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GTGCAACTGGTGGAGTCTGGGGGAGGCTTGGTCCAGCCTGGCGGGTCCCTGAGAGTCTCC 120
